# Contributing to healthy, safe, secure lives

## Basic Ideas and Visions

"Healthy, safe and secure lives" is a common desire for all people. By further mastering the "Observation, Measurement, and Analysis" (measurement and analysis technology) that we have cultivated up until now, the Hitachi High-Tech Group will contribute to a future where people can continue to live healthy and fulfilling lives, centered on three fields of medicine, water/food, and social infrastructure.

## [ Action Targets ]

### 1 Expand access to preventive medicine

We develop and provide in-vitro diagnostic equipment facilitating highly accurate and efficient diagnoses, as well as minimally invasive treatment equipment that enabling patients to balance cancer treatment with work. By digitally connecting these devices and supporting the selection of the optimal treatment for each patient, we will contribute to improving people's QoL and realizing a sustainable social system.

### 2 Ensure the safety of water and food

We will help prevent the accumulation of hazardous substances in water, food, the human body, and elsewhere by developing and providing testing systems specialized for specific markets. In addition, we will supply safe water and support people's safe lives by providing measurement systems for filtered water and drainage in water and sewage systems.

### 3 Ensure the safety of social infrastructure

By realizing non-destructive rapid diagnosis and predictive diagnosis for structures such as roadways, tunnels, railways, and airports, we will contribute to ensuring the safety of social infrastructure and support the safe lives of people.
